In consequence, beam leads are relatively little used, except in special applications such as beam lead microwave diodes. Unpackaged beam lead diodes have extremely low parasitic capacitance and perform well at frequencies above 10GHz, as well as giving improved performance over their packaged counterparts at lower frequencies.

In the IDC-based interconnection system, box-shaped dual-beam terminals reside on a continuous strip. The manufacturer inserts the terminals into a plastic cavity using either semi or fully automatic insertion equipment. The plastic cavity can be molded onto the customer's existing bobbin or can be part of a separately attached housing.

Beam angle and field angle. Besides the beam angle there is also the so-called field angle. In the light circle, the beam angle defines the area where the lamp radiates at least half (50%) of its maximum luminous intensity. The full luminous intensity (100%) is only achieved exactly in the center of the light circle.

9176 Dual-Contact IDC - accepts 18AWG to 24AWG wires with an insulation diameter ranging from 1.1mm to 2.1mm. These dual contact connectors support a 10A current rating with two large SMT solder tails per wire to provide maximum stability on the PCB. Available in 1p-3p configuration, these connectors can be end stackable for higher pin counts.
