EN 868-5:2018 | Packaging for terminally sterilized ...

Part 1 of the BS EN 868 series of European standards specifies general requirements and test methods for all packaging materials and systems intended for use as packaging for medical devices which are to be terminally sterilized in their packaging. BS EN 868-5 provides examples of particular requirements and test methods for heat and self-sealable pouches and reels manufactured from paper complying with EN 868-3 and plastic film complying with clause 4 of this European standard.

BS EN 868-5:2009 - Packaging for terminally sterilized ...

ISO 868:2003 specifies a method for the determination of the indentation hardness of plastics and ebonite by means of durometers of two types: type A is used for softer materials and type D for harder materials. The method permits measurement either of the initial indentation or of the indentation after a specified period of time, or both.

ISO - ISO 868:2003 - Plastics and ebonite — Determination ...

The tensile test is carried out according to EN 868-5 and ASTM F88/F88M. During the tensile test, one or more strips of defined width (e.g. 15 mm) are cut out of the packaging at right angles to the sealing seam. A calibrated tensile testing machine is used to measure the force required to open the sealing.
