## **POGIL Chemistry Teachers Edition**

When designing an experiment, you need to consider three types of variables. The independent variable is changed by the experimenter in the design of the experiment. This variable is sometimes called the "manipulated variable." The dependent variable is what changes as a result of the change in the independent variable.

...

The three variables in this study include course difficulty, drug administration, and course time. Both course difficulty and drug administration are independent variables and course time is the dependent variable. Each independent variable has two levels (there were two groups), thus, this is a 2x2 factorial design. 2.
