RPC Load Balancing. 05/31/2018; 2 minutes to read; In this article. Microsoft RPC Load Balancing is intended to provide a scalable solution for scenarios which demand a high load of RPC over HTTP traffic. The RPC Load Balancer's primary purpose is to ensure RPC/HTTP traffic can be serviced by a server farm to improve scalability.

Use Iis for load balancing : The Official Microsoft IIS Forums

In an ideal world I would like 2 load balancers to sit in front of 2 IIS servers (this is so that if a load balancer goes down, traffic will still get directed to the 2 IIS servers, and if an IIS server goes down, the other will accept traffic). I had looked at using Microsoft NLB, but it doesn't look like it will support what I want to do.

IIS and Load balancing - Windows Server - Spiceworks

Our general recommendation for achieving high-availability of Internet Information Services (IIS) servers is by using Network Load Balancing (NLB) since the servers tend to be hosts for stateless requests – a customer will visit a website, access content, then leave, and it doesn't matter which server hosts the website.
